

# Troubleshooting: Versioning Copy To and Copy From must Contain the Same Set of Dimensions

Olalekan Adebayo  
Updated 2 years ago

## Issue summary

When trying to run a versioning job or save a versioning configuration, you may receive the following error message: *Copy to and Copy from must contain the same set of dimensions.*

## Suggested solution

This may happen if you do not have the same set of dimensions in the Copy From and Copy To sections. In the example below, we must add Period in the Copy From section and Year in the Copy To section.

**Versioning Configuration**Saved Configurations

**Name**

**Filter Dimension by Members**  
**Entity** 100

**Copy From**  
**Year** 2030

**Copy To**  
**Period** 01

**Copy Line Item Details**  

No Line Item Details

▼

☐ Version Parent Members

☐ Clear all destination intersection values before copying

☐ Run Calcs

Save

Run

We will need to update the parameters so that the Copy From and Copy To sections have the same set of dimensions.

Now, we are copying from Year to Year and from Period to Period.

**Versioning Configuration**Saved Configuration

**Name**

**Filter Dimension by Members**  
**Entity** 100

**Copy From**  
**Year** 2030  
**Period** 02

**Copy To**  
**Year** 2031  
**Period** 01

**Copy Line Item Details**  

No Line Item Details

▼

☐ Version Parent Members

☐ Clear all destination intersection values before copying

☐ Run Calcs

Save

Run

Once completed, you will be able to run the versioning job successfully or save the versioning configuration successfully.

## Cause

This could happen if you do not have the same set of dimensions in the Copy From and Copy To sections.

## Keywords

versioning, copy to, copy from, must contain the same set of dimensions
