

How-To: Data Model Series (Part 2): Hierarchies and Roll-Ups

Vena Support Team
Updated 6 months ago

About this series

This series is all about **how to build and use Data Models**. You are in **Part 2**, which provides step-by-step instructions on how to build and manage a Dimension.

This series was designed to be read in order. If you don't have any previous experience with the Data Model tool, we recommend that you follow this approach, starting with Part 1. But if you are already familiar with Vena Data Models and are just looking for a refresher, you can also feel free to dip in anywhere within this series.

Part 1: Building a Data Model

Part 2: Hierarchies and Roll-ups - **you are here**

Part 3: Attributes and Versioning

Part 4: ETL Tool

Before you begin

To follow the instructions in this article, you will need at least **Modeler** access. If Data Permissions are set up in your environment, you will also need the appropriate permissions for the data that you are working with.

Overview

Hierarchies and Roll-Ups

The dimensions of an OLAP cube are structured into hierarchies. For example, in a database that tracks information for periods, hierarchies may be broken down into:

- All Period (Complete year)
- Halves
- Quarters
- Months

An example of a hierarchy. (Displaying dimensions and dimension members.)

Member Name	Alias	Attributes	Operator
All Departments			+
Test			+
D10	Sales	SMB Rollup	+
Corporate			+
D20	Services	SMB Rollup	+
D30	Marketing		+
D40	Acct / Finance	SMB Rollup	+
D50	Engineering		+

A Dimensions Display all dimensions created within a data model.

B Dimension Members Dimension member hierarchy.

C Roll-up Lower-level members (child members) will "roll-up" under this umbrella.

D	Bottom Level Member	Lower-level dimension member which fits under the parent umbrella dimension members.
----------	---------------------	--

Dimension/Dimension Member tools

Leverage the available tools on the *Members* page to build your hierarchy.

The screenshot shows the Vena software interface with the 'Members' page selected. The left sidebar includes options like Versioning, ETL Templates, Export, and Settings. The main area shows a list of dimension members under a selected dimension ('Department'). A context menu is open over the member 'Corporate', listing options such as Edit, Add Sibling, Add Child, Preview Intersections, Expand All, Cut, Add Calculated Member, Sort Children by Name, Sort Children by Alias, and Delete. The interface has a green header bar with tabs for Dev, Manager, Tasks, Modeler, Insights, Reports, Admin, and Help.

A Choose Data Model Select the drop-down menu, and then select from the available data models.

B Dimensions A list of dimensions of the selected data model.

C Dimension Member Selected dimension member.

D Operator Aggregation method used for roll-up dimension member:

- (~) No Aggregation
- (+) Add
- (-) Subtract

E Edit Allows you to rename the member, add/edit an alias, add/edit attributes and add/edit an operator.

F Sibling Member Create a new sibling of the selected member.

G	Child Member	Create a new child (subordinate) member of the selected member.
H	Preview Intersections	Preview all data intersections for selected member with the option to export to a CSV file.
I	Expand All	Display all levels of the hierarchy.
J	Cut	Cut the selected member.
K	Add Calculated Member	Add a calculated member to this dimension member. Learn more about Calculated Members.
L	Sort Children by Name	Option to sort children alphabetically by name.
M	Sort Children by Alias	Option to sort children alphabetically by alias.
N	Pin as Default Member	Allows you to manually select a specific member as the Default Member. Learn more about Default Members.
O	Delete	Allows you to delete a dimension member.

How to

Add a Dimension

1. Navigate to the **Modeler** tab. The **Data Modeler** window should open automatically.

2. Select the **data model** that you want to add the dimension to (*Reporting*, in this example).

The screenshot shows the Vena Modeler interface. The top navigation bar includes Dev, Manager, Tasks, Modeler (highlighted with a red box), Insights, Reports, and Admin. On the left, a sidebar has 'Data Modeler' selected (highlighted with a red box). The main area displays a list of data models:

Data Model Name	Description
A. Reporting	Reporting
B. Consolidated Reporting	Reporting

Or, if you are in the *Members* section, choose your **data model** from the **drop-down menu**:

The screenshot shows the Vena Modeler interface with 'Members' selected in the top navigation bar (highlighted with a red box). A dropdown menu is open under 'Data Model' with the path '/ Model Structure for A. Reporting'. The dropdown menu contains several options:

- B. Consolidated Reporting
- C. 1 - Cost - Capital Assets (...)
- C. Cost - Capital Assets
- D. 1 - Cost - Workforce Plan...
- D. Cost - Workforce Planning
- E. 1 - Rev - Subscription Pla...
- E. Rev - Subscription Plann...
- F. Rev - Product Revenue Pl...

3. Select the **pencil icon** () at the end of the Dimensions list.

The screenshot shows the Vena Modeler interface with the 'Dimensions' list visible. A red arrow points to the pencil icon () located at the end of the list. The dimensions listed are:

Member Name	Alias	Attributes	Operator
Test			+
D10	Sales	SMB Rollup	+

4. Select **+ Add Dimension**.

5. Enter a name for the new Dimension in the textbox.

6. Select **+ Add Dimension** to save the dimension.

Dimensions In Cube

Name	Type
Sample Dimension	

+ Add Dimension X Cancel

Note

Be aware that if you add a new Dimension, any previously mapped templates will have to be updated to map the new Dimension.

Edit a Dimension name

Editing a dimension name after it has been created will impact existing data records but will not impact (break) reports that display the data from a specific data model.

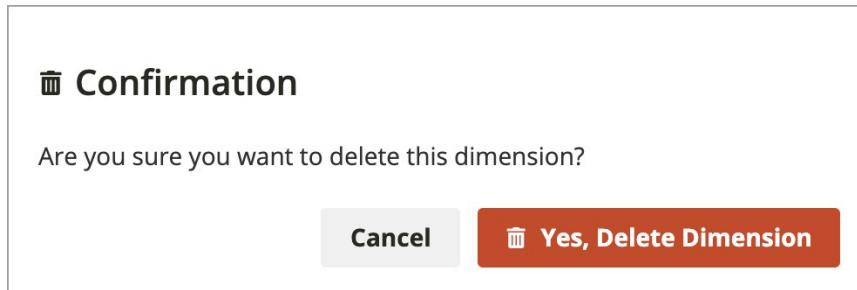

1. Navigate to the **Modeler** tab.
2. Select the **Data Modeler** sidebar.
3. Select the (pencil) icon at the end of all the dimension names. This opens the drawer showing existing dimensions in the model.
4. Hover over the dimension you want to rename and select the (pencil) icon.
5. Type in the new dimension name and select **+ Update** to save the change.

Delete a Dimension

It is rare that you would need to delete a dimension after setting up a data model. However, in the event that you have made an error or need to re-order members, then you can delete a dimension by following these steps.

1. Navigate to the **Modeler** tab.
2. Select the **Data Modeler** sidebar.
3. Select the (pencil) icon at the end of all the dimension names. This opens the drawer showing existing dimensions in the model.
4. Hover over the dimension you want to delete and select the (trash) icon.

5. Select **Yes, Delete Dimension** in the confirmation pop-up to delete the dimension.

Caution

Be aware that if you delete a dimension, all dependent mappings will lose access to related members and data.

Create a Member

1. Navigate to the **Modeler** tab.
2. Navigate to the **Data Modeler** page.
3. Navigate to the **Members** sidebar tab.
4. Select the **data model** from the drop-down menu.
5. Select the targeted **dimension**.
6. Right-click a **dimension member**.
7. Select either **Add Sibling** or **Add Child** as your new member.

The screenshot shows the Vena Solutions Data Modeler interface. At the top, there's a navigation bar with tabs for Account, Department, Year (which is selected), Period, Scenario, Currency, Measure, and a pencil icon. To the right is a search bar with the placeholder "Search in Year". Below the navigation is a table header with columns: Member Name, Alias, Attributes, Operator, and Actions. The first row shows a checkbox and the text "Member Name". The second row shows a checkbox and "All Years". The third row shows a checkbox and "2020". In the "Actions" column for the "2020" row, a context menu is open, containing "Edit", "Add Sibling", and "Add Child". The "Add Sibling" and "Add Child" options are highlighted with a red box. There are also other options like "Preview Intersections" and "A".

A Available Dimension Members

- **Sibling** - **Sibling** members are members on the same hierarchical level under the same parent member.
- **Child** - A **Child** member is a sub-member (descendant) of a Parent/Sibling member.

B Alias

An alternative description used to reference a Dimension Member.

Alias

C Operator

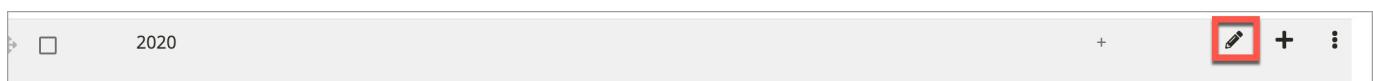

Aggregation method used for Dimension Members.

- (~) No Aggregation
- (+) Add
- (-) Subtract

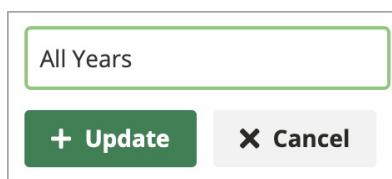

Rename a Member

Like dimensions, editing a member name after it has been created will impact existing data records but will not impact (break) reports that display the data from a specific data model.

1. Locate the member you want to rename from the member list.
2. Hover over the member and select the  (pencil) icon.

3. Rename your member.
4. Select + **Update** to save the change.

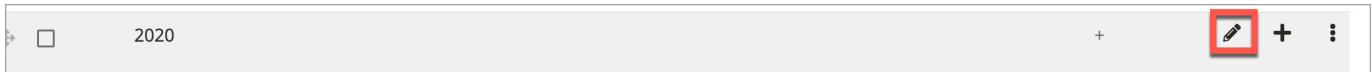

Add a Dimension Member Alias

An **Alias** is an alternative descriptive handle used to reference the dimension member. An alias can be referenced when applying data mappings. It is useful as dimension members can have long or complex names, and aliases provide the ability to use alternate names.

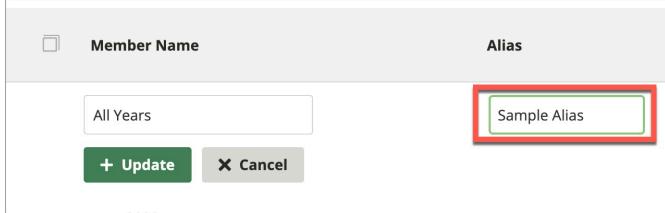

1. Locate the member you want to add an alias for.

2. Hover over the member and select the  (pencil) icon.

3. Add a name under the **Alias** textbox.

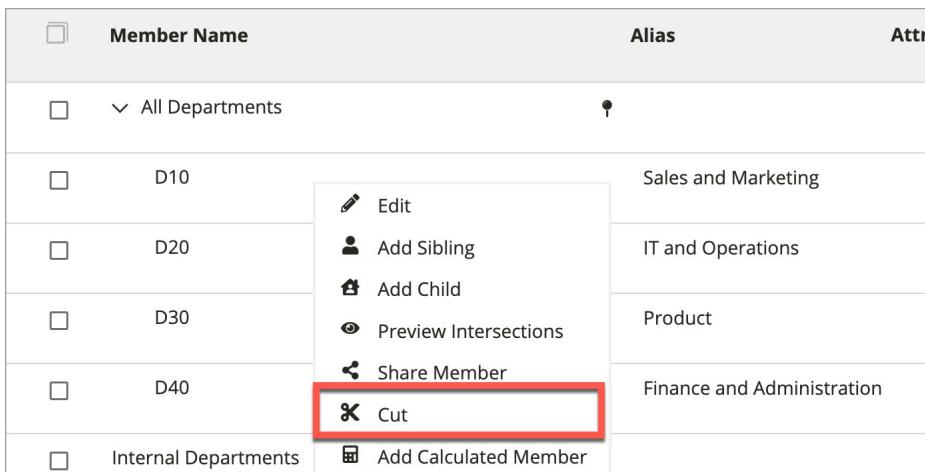

4. Select **+ Update** to save the change.

Cut/Paste a Dimension Member

Re-ordering dimension members often occurs as a result of organizational changes, such as the reduction or reallocation or cost centers. In this event, easily move a dimension member to a different location by following these steps.

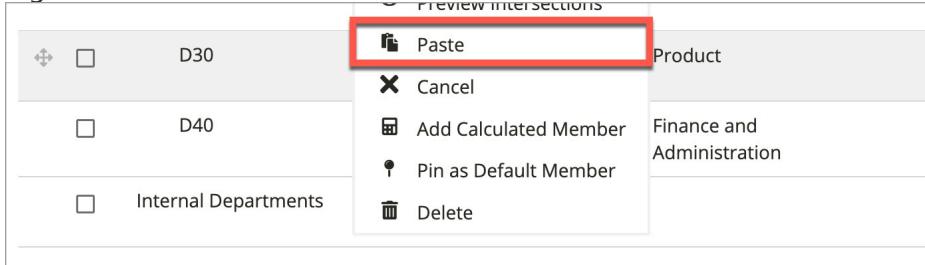

1. Select the appropriate **data model**.
2. Right-click anywhere in line with the **dimension member** you wish to modify.
3. Select **cut**.

<input type="checkbox"/> Member Name	Alias	Attribute
<input type="checkbox"/> All Departments		
<input type="checkbox"/> D10	Sales and Marketing	
<input type="checkbox"/> D20	IT and Operations	
<input type="checkbox"/> D30	Product	
<input type="checkbox"/> D40	Finance and Administration	
<input type="checkbox"/> Internal Departments		

4. Navigate to the dimension member location you wish to paste.

5. Right-click the dimension and select **Paste**.

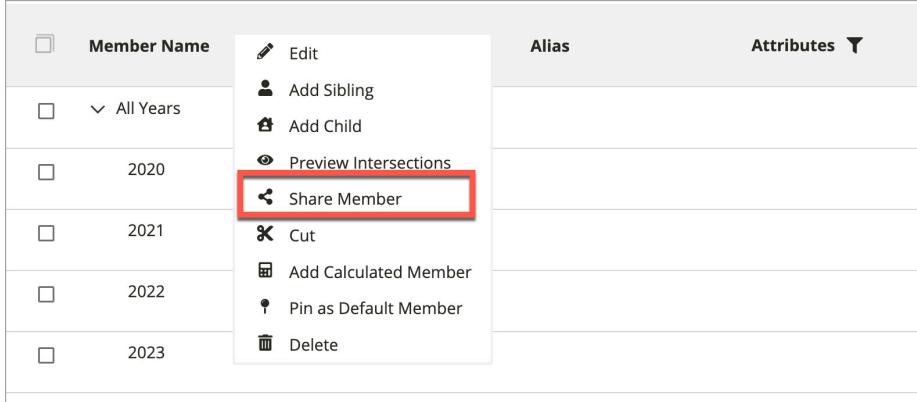

<input type="checkbox"/> Member Name	Attribute
<input type="checkbox"/> D30	Product
<input type="checkbox"/> D40	
<input type="checkbox"/> Internal Departments	

6. This will deposit the member in the new position in the hierarchy. Select **Cancel** if you no longer wish to move the member.

Share a Dimension Member

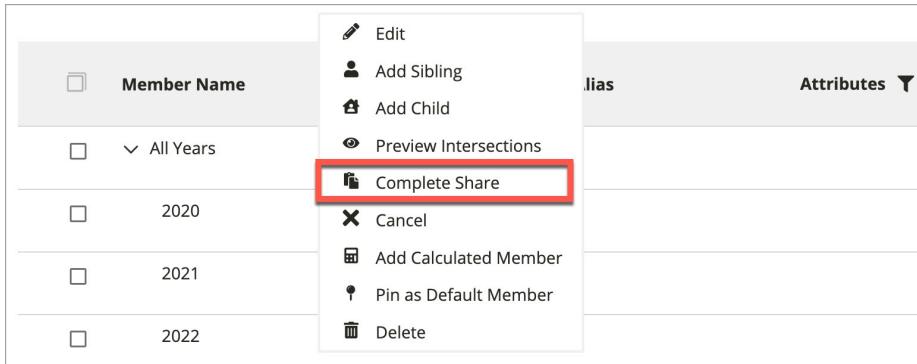

The **Shared Members** functionality allows Modelers to create alternate hierarchies within a dimension. Shared members make aggregated reporting of collected data in a number of ways possible. For example, within the Period dimension, Month members can be shared to allow for the aggregation of quarter-to-date and year-to-date values. To share a dimension, follow these steps:

1. Select the **data model**.
2. Select the **dimension** from the *Member Name* list you wish to share.
3. Right-click the dimension member from the *Member Name* list.
4. Select the **Share** button. A pop-up window notifies you that the member can now be shared.

A screenshot of the Vena Solutions interface. On the left, there is a list of dimension members under the heading 'Member Name'. The members listed are 'All Years', '2020', '2021', '2022', and '2023'. A context menu is open over the '2020' member. The menu items include: Edit, Add Sibling, Add Child, Preview Intersections, Share Member (which is highlighted with a red box), Cut, Add Calculated Member, Pin as Default Member, and Delete.

5. Navigate to, then right-click on the destination umbrella dimension member you wish to share with. Right-click on the member and select **Complete Share** button. Select **Cancel** if you no longer wish to share the member.

A screenshot of the Vena Solutions interface, similar to the previous one but with a different context menu. The 'Member Name' list includes 'All Years', '2020', '2021', and '2022'. A context menu is open over the '2020' member. The menu items include: Edit, Add Sibling, Add Child, Preview Intersections, Complete Share (which is highlighted with a red box), Cancel, Add Calculated Member, Pin as Default Member, and Delete.

6. The shared member will appear in the hierarchy with a Share symbol next to it.

Delete a Dimension Member

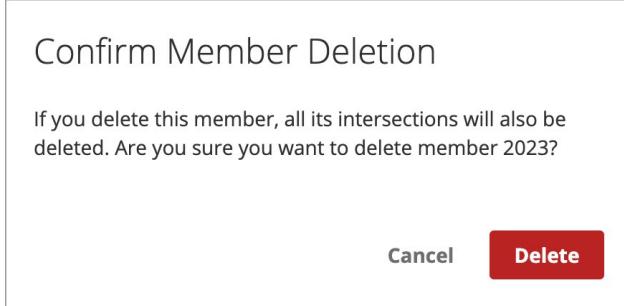

In order to preserve historical reporting, any member with data attached to it should not be deleted. Deleting a member will also delete all associated data. It should be noted that unused members may be excluded from a report without being deleted.

1. Navigate to the desired data model.
2. Right-click the dimension member from the *Member Name* list that you want to delete.

3. Select **Delete**.

A screenshot of a data model interface. On the left, there is a list of members under the heading 'Member Name'. The members listed are 'All Years', '2020', '2021', '2022', and '2023'. A context menu is open over the '2023' member, listing options: Edit, Add Sibling, Add Child, Preview Intersections, Share Member, Cut, Add Calculated Member, Pin as Default Member, and Delete. The 'Delete' option is highlighted with a red box.

4. If you are sure you want to delete the member, select **Delete** in the confirmation pop-up window.
